CD Mechanism Type	CDM-66

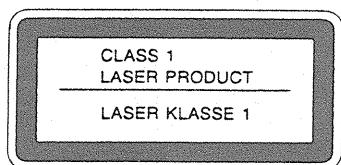

SPECIFICATIONS

CD section

System	Compact disc digital audio system
Laser diode properties	Material: GaAlAs
	Wavelength: 780 nm
	Emission duration: Continuous
	Laser output: Max. 44.6 μ W*
	* This output is the value measured at a distance of 200 mm from the objective lens surface on the Optical Pick-up Block.
Spindle speed	500 r.p.m. to 200 r.p.m. (CLV)
Scan velocity	1.2 - 1.4 m/sec.
Error correction	Sony Super Strategy Cross Interleave Reed Solomon Code
D-A conversion	16-bit linear 8 fs digital filter
Frequency response	20 - 20,000 Hz $\pm \frac{1}{3}$ dB
Wow and flutter	Below measurable limit**
Outputs (at 6 V input level)	Line output (stereo minijack) Output level 0.6 V rms at 50 kilohms Load impedance over 10 kilohms Headphones (stereo minijack) 9 mW + 9 mW at 16 ohms

** Measured by EIAJ CP-307

For the Customers in the United Kingdom and European Countries

This Compact Disc player is classified as a CLASS 1 LASER product. The CLASS 1 LASER PRODUCT label is located on the bottom exterior.

General

Power requirements	Rechargeable battery pack BP-2EX (supplied) Battery case EBP-2 (supplied) and two size AA (LR6) alkaline batteries (not supplied) DC IN 6 V jack accepts: Sony AC power adaptor (supplied) for use on 120 V AC, 60 Hz Sony CPM-200P mount plate for use on 12 V car battery (not supplied)
Power consumption	1.4 W DC
Dimensions	Approx. 128 x 30.2 x 145 mm (5 1/8 x 1 1/4 x 5 3/4 in.) (w/h/d) not incl. Inclined part (depth), projecting parts and controls
Weight	Approx. 310 g (11 oz) not incl. rechargeable battery
Supplied accessories	Approx. 395 g (14 oz) incl. rechargeable battery AC power adaptor (1) Rechargeable battery pack (1) Hand strap (1) Connecting cord (1) (stereo miniplug \leftrightarrow two phono plugs) Battery case (1) Headphones (1)

Design and specifications subject to change without notice.

CAUTION

Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK OR DOTTED LINE WITH MARK ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!

LES COMPOSANTS IDENTIFIÉS PAR UNE MARQUE SUR LES DIAGRAMMES SCHÉMATIQUES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

SECTION 2

SERVICING NOTES

NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK OR BASE UNIT

The laser diode in the optical pick-up block may suffer electrostatic breakdown because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body.

During repair, pay attention to electrostatic breakdown and also use the procedure in the printed matter which is included in the repair parts.

The flexible board is easily damaged and should be handled with care.

Before Replacing the Optical Block

Please be sure to check thoroughly the parameters as per the "Optical Block Checking Procedures" (Part No.: 9-960-027-11) issued separately before replacing the optical block. Note and specifications required to check are given below.

- FOK output : IC501⑨pin
When checking FOK, remove the lead wire to spindle motor and unsolder and open IC801⑧pin (FOK).
- S carve P-to-P value : 2.5Vp-p
When checking S carve P-to-P value, remove the lead wire to spindle motor.
- Adjusted part for focus gain adjustment : RV505
- RF signal P-to-P value : 0.8 – 1.35Vp-p
- Traverse signal P-to-P value : 1.8Vp-p
- The repairing grating holder is impossible.
- Adjusted part for tracking gain adjustment : RV501

Flexible Circuit Board Repairing

- Keep the temperature of the soldering iron around 270°C during repairing.
- Do not touch the soldering iron on the same conductor of the circuit board (within 3 times).
- Be careful not to apply force on the conductor when soldering or unsoldering.

Notes on chip component replacement

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

NOTES ON LASER DIODE EMISSION CHECK

The laser beam on this model is concentrated so as to be focused on the disc reflective surface by the objective lens in the Optical pick-up block. Therefore, when checking the laser diode emission, observe more than 30cm away from the objective lens.

Laser Diode Check Procedure

The laser diode on this set will not emit unless the top panel is closed and S901 is turned on. The laser diode will always emit even if focus search is not performed in service mode.

Procedure 1 (service mode or normal operation)

Check the laser diode emission with the eye.

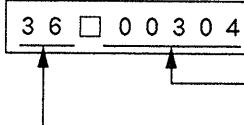

1. Open top panel.
2. Turn on S901 in Fig. 1.
(In service mode, this operation is not necessary.)
3. Press the **▶||** key.
(In service mode, this operation is not necessary.)
4. Observe the objective lens and confirm that the laser diode is emitting light. At this time, the laser diode goes on about 10 seconds due to focus search.

Procedure 2 (service mode or normal operation)

Check by the current with flows in the laser diode.

1. Close the top panel.
2. Remove the main board and read the current value on the label affixed to the Optical pick-up block.

(Label attached to the flexible circuit board
of the optical pick up.)

This figure shows the machine number of the optical pick up.

This figure shows the electric current value. In this case, it shows 36mA.

The electric current values differs depending on the model.

3. Connect a VOM to TP1 and TP2 (both side of R510: $10\ \Omega$)
4. Press the **▶||** key.
5. Calculate the current by the VOM reading.
VOM reading (V) \div resistance of R510 = current (A)
ex. VOM reading = 0.37V
 $0.37 \div 10 = 0.037$ (A) = 37 (mA)
6. Confirm that the ammeter reading is within the range given below.
value on label $\pm 5\%$ mA (25°C)
variation relative to temperature: $0.4\text{mA}/^{\circ}\text{C}$
(Current increases when temperature rises and decreases when it drops.)

SERVICE MODE (service program)

• Step 1 (Service Mode setting method)

1. Turn the HOLD switch to OFF with the external power supply not plugged in (no power applied to set).
2. Press the **▶||** key.
3. Solder jumper TEST terminal.
(IC801 pin @ BAT-E is grounded.)
4. Plug in external power supply.
This puts the set into service mode.

• Step 2 (Service Mode operation)

1. When service mode is set, the display will change 6 times, and those 6 changes will be repeated over and over.
Even if LCD dose not display, other operations will be performed.
2. When **▶||** or **◀||** key is pressed, the optical pick-up block moves to the inside or outside circumference. Tracking servo and sled servo go off when this is done, so press KEY-MODE to turn on the tracking servo if necessary.
3. When REMAIN is pressed, the display stops. When REMAIN is released, the display continues to change. This allows check of each segment.
4. When **▶||** Key is pressed, CLV-S (pull-in mode) starts while performing focus search. When there is no disc installed, focus search is repeated with rotating disc motor.
5. When KEY-MODE is pressed, tracking servo, sled servo and CLV-A (servo during PLAY) go ON.
6. When 4 and 5 are performed, the disc begins to play. At this time, the top panel should be closed and S901 are to be ON. A sound is not produced as muting is ON.
7. All servo (focus, tracking, sled and spindle) go off when **■** key is pressed. Disc motor rotate by inertia for a some time.

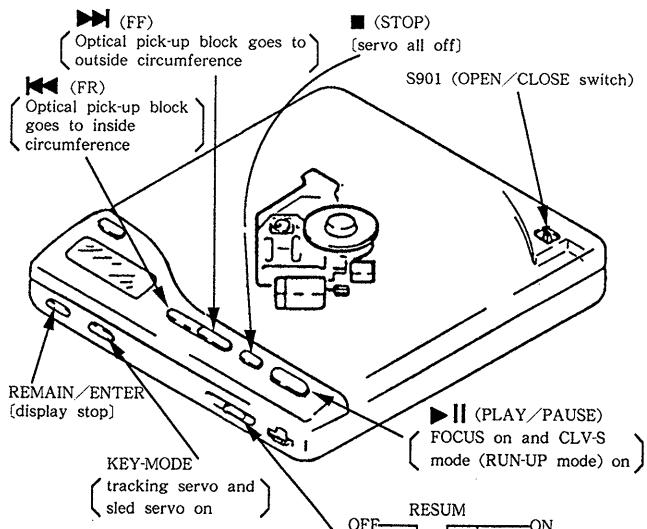

Fig.1

• Step 3 (Service Mode release)

1. First be sure to unplug the external power supply.
2. Then remove the solder jumper TEST terminal.
3. The set will now operated normally.

SECTION 3

ELECTRICAL ADJUSTMENTS

Notes on Adjustment

1. Perform adjustments except for BATTERY REMAINS ADJUSTMENT in service mode.
Be sure to release service mode after completing adjustment.
(Refer to "Service Mode (service program)" on page 4.)
2. Perform adjustments in the order given.
3. Use YEDS-18 disc (part No.: 3-702-101-01) only indicated.
4. Power supply voltage : DC 6V
HOLD switch : OFF
VOLUME knob : MIN

PREPARATION

Put the set into service mode (See page 4.) and perform the following checks.

• Sled Motor Check

1. Press the OPEN button and open the top panel.
2. Press the **▶▶**, **◀◀** keys and make sure that the optical pick-up block moves smoothly, without catching, from the inmost → outmost → inmost circumference.

▶▶ : UPF moves outward

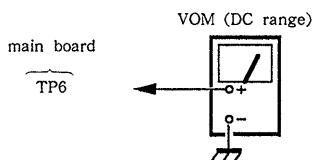

◀◀ : UPF moves inward

• Focus Search Check

1. Press the OPEN button and open the top panel.
2. Press the **▶▶** key. (Focus search is performed continuously.)
3. Observe the UPF objective lens and check that it moves smoothly up and down with no catching or noises.
4. Press the **■** key.
Check that focus search operation stops. If it does not, press the **■** key again.

Recharging voltage Adjustment

Adjustment method :

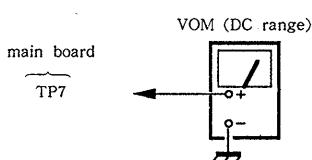

1. Connect a tester to TP6 of the main circuit board.
2. Apply 6V DC from the external power jack CN401.
3. Adjust RV402 so that the reading of the tester becomes 4.9V ~ 5V.

Note: Read the value after that the read of the tester becomes clam.

+3.6V Adjustment

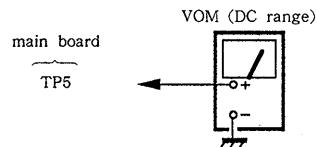

Adjustment method :

1. Aadjust the power voltage after applying +3.0V between the terminals of BATT (AM3).
2. Set the set to the service mode stop status.(see page 4.)
3. Connect a tester to TP7 of the main circuit board.
4. Adjust RV403 so that the reading of the tester becomes 3.55V ~ 3.65V.
5. After performing adjustment, release the service mode.

+5V Adjustment

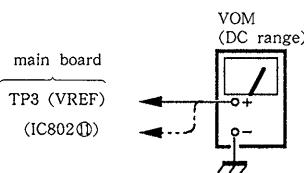

Adjustment Procedure :

1. Put the set into STOP state service mode (see page 4).
2. Connect the VOM to main board test point TP5
3. Adjust RV401 for 5V ± 0.5V on the VOM reading.
4. After adjustment, release service mode (see page 4).

Battery Remains Indication Adjustment

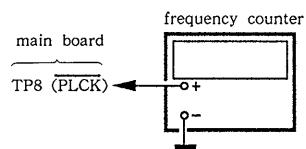

Adjustment procedure :

1. Make sure to turn ON S401
2. Apply DC 3.5V both side of battery terminal.
3. Insert the disc (YEDS-18) and press the **▶▶** key.
4. Adjust RV801 so that the voltage of TP4 (IC802⑩) is the same as TP3 (V REF).

PLL Free Run Frequency Check and Adjustment

Check/Adjustment Procedure :

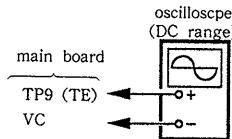

1. Open the jumper terminal of Z3 (EFM).
2. Connect a frequency counter to test point TP8 (PLCK) of the main circuit board.
3. Set the unit to the service mode stop status,(see page 4.)
4. Confirm that the reading of the frequency counter is $4.31 \pm 0.01\text{MHz}$.
If that is not the case, adjust RV504 so that the reading of the frequency counter becomes $4.31 \pm 0.01\text{MHz}$.
5. After performing adjustment, release the service mode, (see page 4.)
6. Short circuit the jumper terminal which was opened in step 1 above

Tracking Balance Adjustment

Conditions :

The set should be placed either horizontally.

Adjustment Procedure :

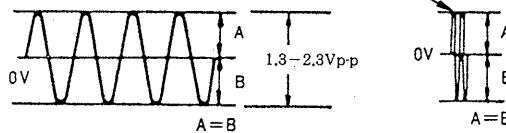

1. Connect the oscilloscope to main board TP9 (IC501①).
2. Put the set into service mode (See page 4.)
3. Press the **→** and **←** keys to move the UPF to the center.
4. Insert the disc (YEDS-18) and close the top panel.
5. Press the **▷** key.

It will go from focus search to focus on, and CLV pull-in mode state. Tracking and sled are OFF.

6. Adjust RV502 so that the oscilloscope waveform is symmetrical on the top and bottom in relation to 0V.

Note : Take sweep time as long as possible to obtain best waveform.

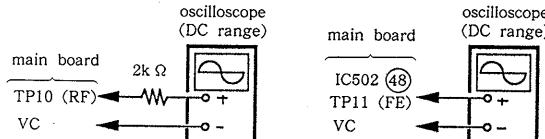

7. Unplug the external power supply to stop spindle motor from rotating.
8. After adjustment, release service mode (see page 4).

Focus Bias Adjustment

Conditions :

The set should be placed either horizontally.

Adjustment Procedure :

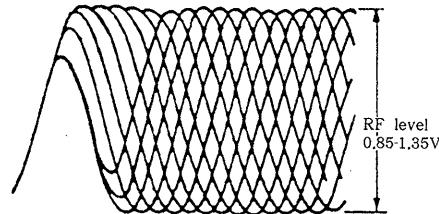

1. Put the set into STOP state in service mode (See page 4).
2. Connect the oscilloscope to main board test point TP10(IC501⑭).
3. Press the **→** and **←** key to move the UPF to the center. (Move the UPF to the music area on the disc to enable easy visibility of the eye pattern).
4. Insert the disc (YEDS-18) and close the top panel.
5. Press the **▷** key.

6. Press the KEY-MODE button.
7. Adjust RV503 so that the oscilloscope waveform eye pattern is good. A good eye pattern means that the diamond shape (\diamond) in the center of the waveform can be clearly distinguished.

• RF Signal Reference Waveform (eye pattern)

VOLT/DIV : 200mV

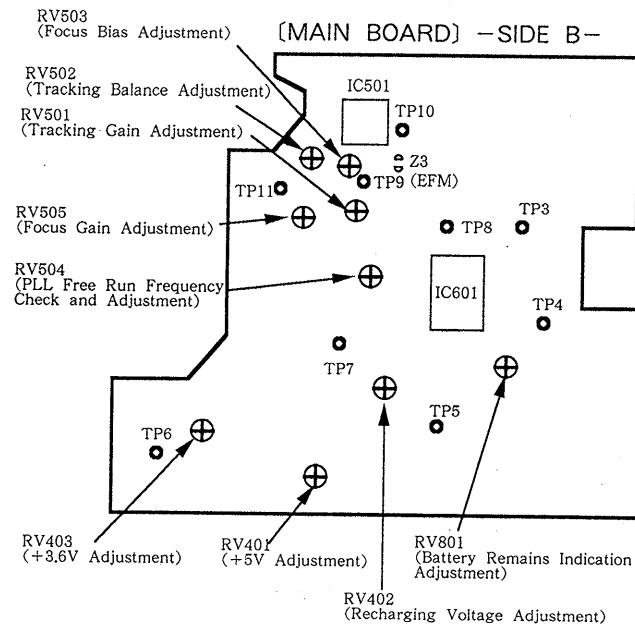

TIME/DIV : 500nS

When observing the eye pattern, set the oscilloscope for AC range and raise vertical sensitivity.

8. Measure the voltage of TP11 (IC502⑧). (Service mode stop status)
Readjust RV503 according to the voltage range as follows :
When minimum +10mV, set to +10mV, and when less than -50mV, set to -50mV.
9. Remove the external power supply and stop the spindle motor.
10. Release the service mode.

Adjustment Parts Location Diagram

Reference

Focus/Tracking Gain Adjustment

On this set, it is very difficult to simplify this adjustment.

A frequency response analyzer or CD jig is necessary in order to perform this adjustment exactly.

However, this gain has a margin, so even if it is slightly off, there is no problem. Therefore, do not perform this adjustment.

Focus/tracking gain determines the pick-up followup (vertical and horizontal) relative to mechanical noise and mechanical shock when the 2-axis device operate.

- When gain is high, the noise when the 2-axis device operates increases.
 - When gain is low, it is more susceptible to mechanical shock and skipping occurs more easily.

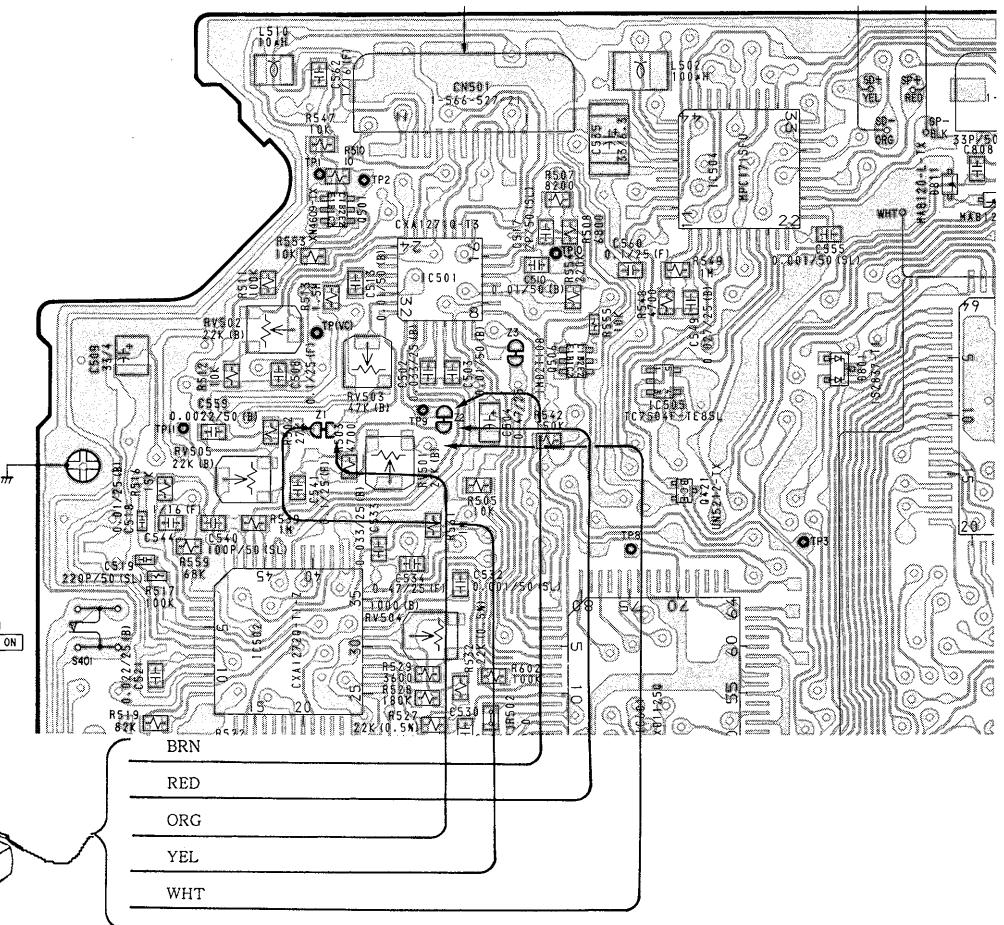

However, as these reciprocate, the adjustment is at the point where both are satisfied.

This adjustment is to be performed with using when replacing the following parts:

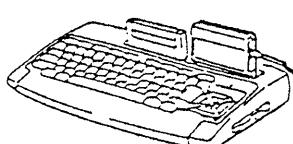

- UPF (optical pick-up block)
 - RV501 (tracking gain volume)
 - RV505 (focus gain volume)

Adjustment Parts Location Diagram

{MAIN BOARD} -SIDE B-

CD jig connection:

CD jig

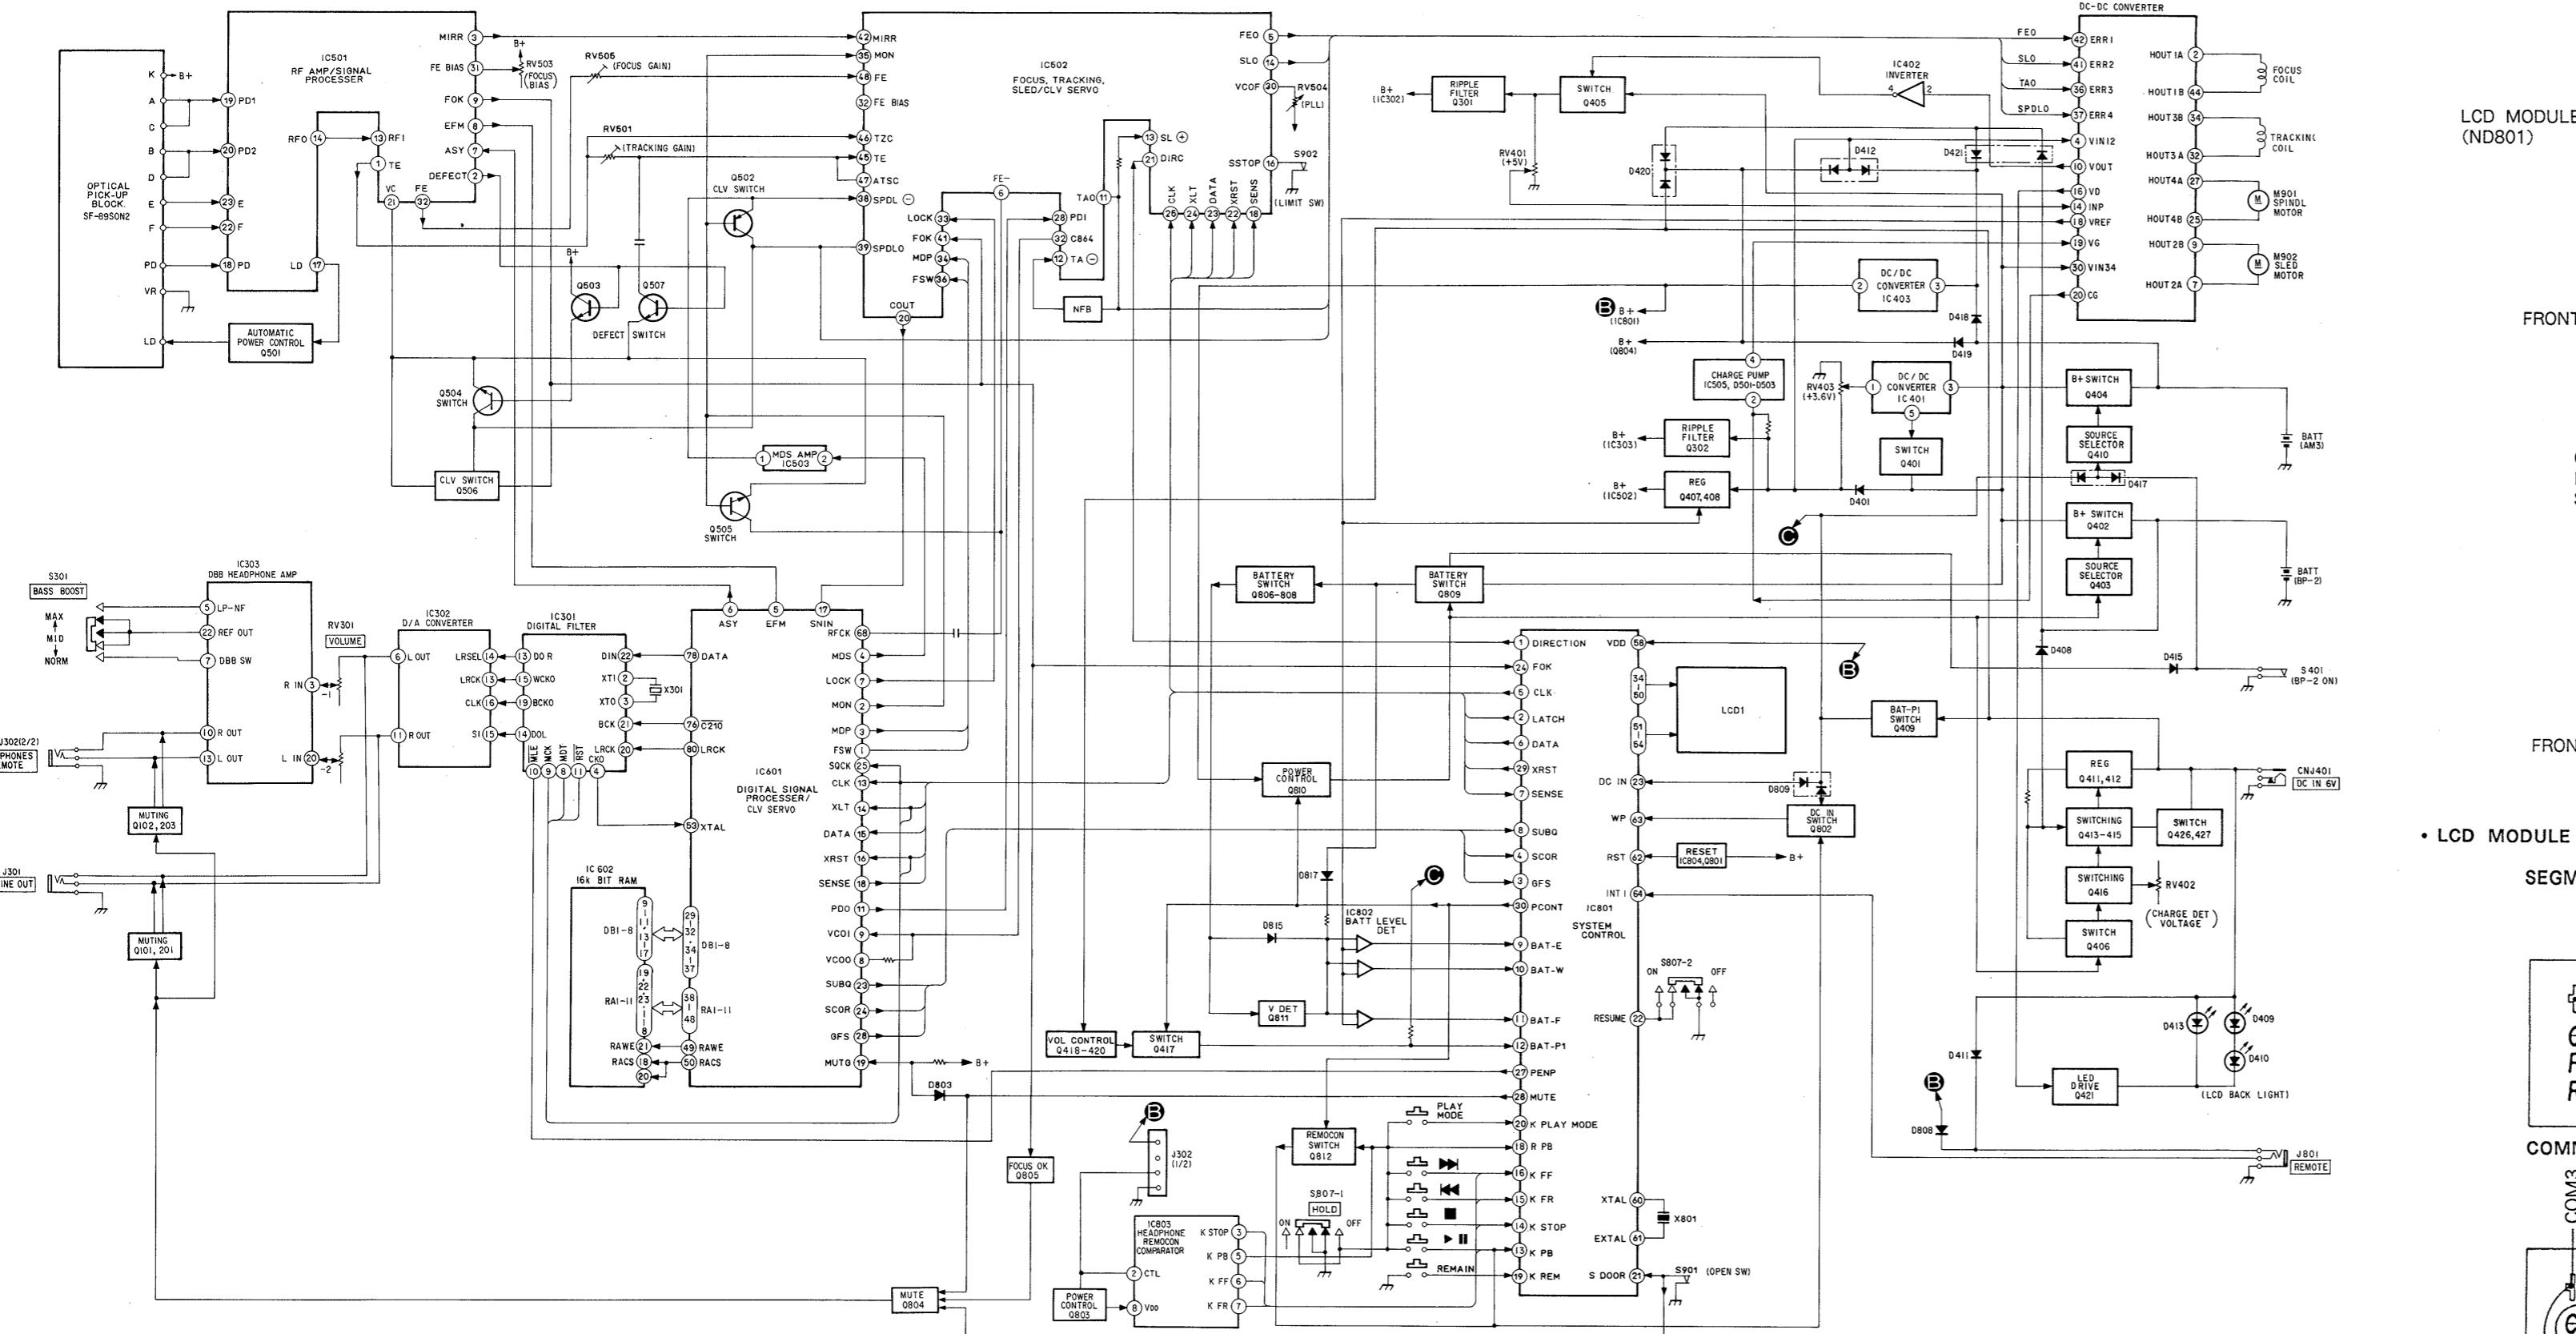

CD jig connection:

Remove the solder jumpers at the TE and FE locations and connect the CD jig.

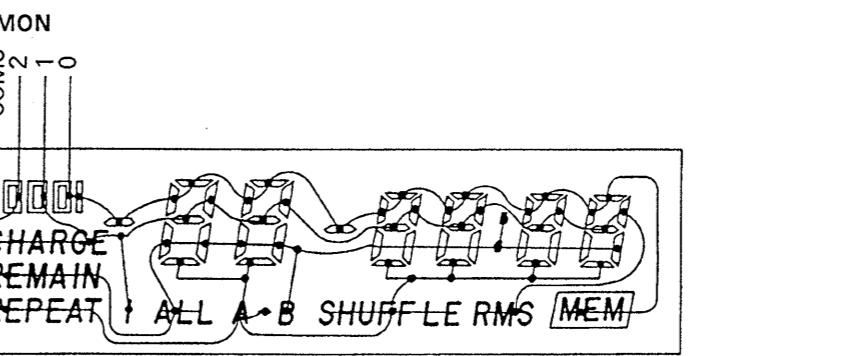

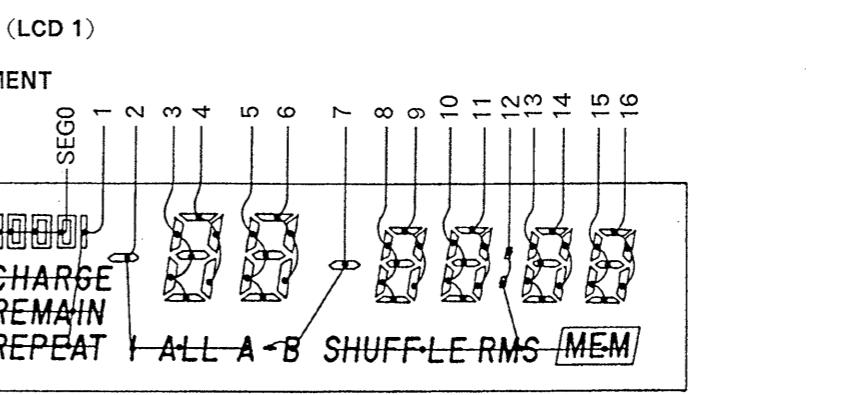

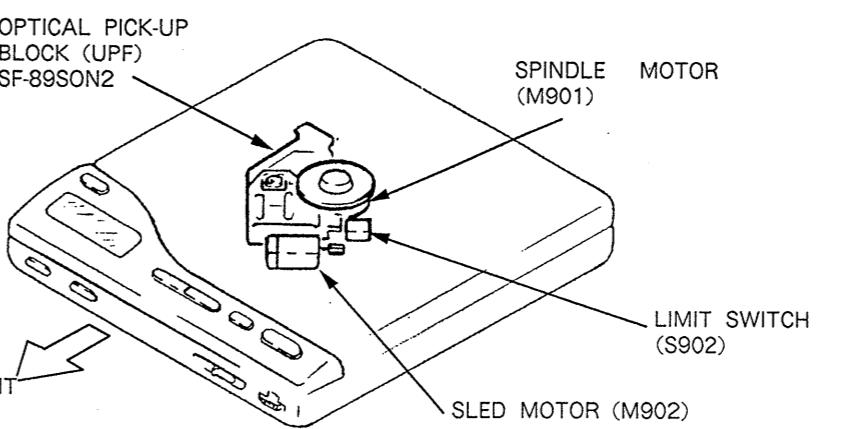

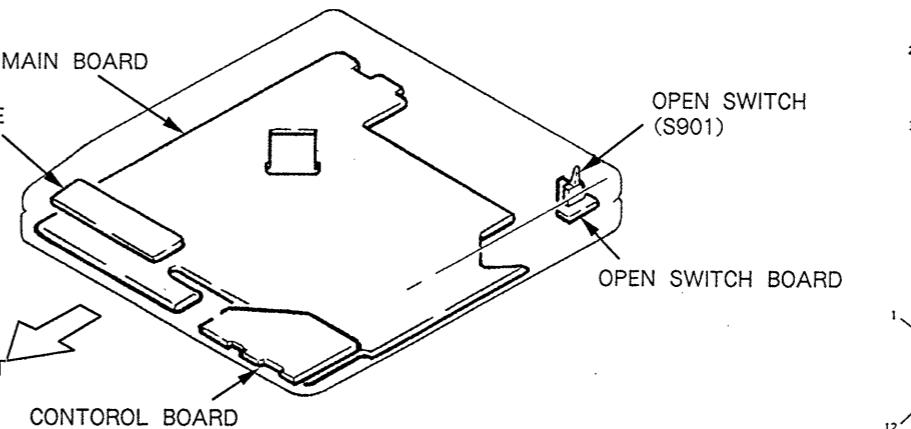

The adjustment procedure is described in the separate CD Jig Instruction Manual.

SECTION 6

ELECTRICAL PARTS LIST

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- If there are two or more same circuits in a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

CAPACITORS:
MF: μF , PF: $\mu\mu\text{F}$.

RESISTORS

- All resistors are in ohms.
- F: nonflammable

COILS

- MMH: mH, UH: μH

SEMICONDUCTORS

In each case, U: μ , for example:
UA...: μA ..., UPA...: μPA ...,
UPC...: μPC , UPD...: μPD ...

The components identified by mark \triangle or dotted line with mark \triangle are critical for safety.
Replace only with part number specified.

Les composants identifiés par une marque \triangle sont critiques pour la sécurité.
Ne les remplacer que par une pièce portant le numéro spécifié.

- AUS ... Australian model
